CHRISTIAN VAZ

Full-Stack Developer

Rutland, MA | ChristianTech77@gmail.com | github.com/Christianvdev

PROFESSIONAL SUMMARY

Full-stack developer who takes web applications from idea to production: frontend, backend, database, authentication, and deployment. Independently designed, built, and deployed a live SaaS platform with real users, alongside professional backend engineering experience in a production environment.

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, SQL

Frontend: React, HTML5, CSS3, Tailwind CSS

Backend: Django, Django REST Framework, Node.js, REST APIs

Databases: PostgreSQL, SQLite

Authentication: JWT Authentication

Tools: Git, GitHub, Swagger

Deployment: Render, Railway, Netlify, Vercel

Integrations: Stripe, Groq API

PROJECTS

MotoTracker — Full-Stack SaaS Application | *Django, React, PostgreSQL, JWT, Stripe, Render, Netlify*

- Identified a real problem for motocross riders and independently designed, built, and deployed a full-stack SaaS platform to track bikes, riding hours, maintenance history, parts, and service records.
- Built the Django/PostgreSQL backend and React frontend end to end, designing REST APIs, relational data models, and CRUD workflows.
- Implemented JWT authentication and authorization with automatic token refresh, enforcing user-scoped data access across the application.
- Deployed the application to production (Render, Netlify) and launched it publicly, reaching real registered users through TikTok and Instagram promotion.
- Continue to maintain and improve the application, including planned Stripe-based subscription billing.

JobTracker — Full-Stack Job Application Tracker | *Django, React, PostgreSQL, JWT, Groq API*

- Designed and built a full-stack job application tracker with a Django REST backend and React frontend to help users organize job applications.
- Integrated the Groq API to add AI-assisted parsing of job descriptions into structured data.

Fitness Tracker — Full-Stack Application | *Django, React, PostgreSQL, JWT*

- Built a full-stack fitness tracking application with a Django REST backend, React frontend (Railway, Vercel), and JWT authentication with automatic token refresh via Axios interceptors.
- Implemented authenticated, user-scoped workout logging by day of week, including intensity tracking and a weekly stats dashboard.

PROFESSIONAL EXPERIENCE

Python Software & Network Engineering Intern — Springer Capital (GreenTree) *Remote | Apr 2025 – Jul 2025*

- Developed and maintained Django backend services with a focus on REST API design and data modeling in a production environment.
- Performed PostgreSQL schema migrations and debugged backend issues as part of Agile sprint delivery and code review.

Independent Web Development Instructor — Acorn Education *Remote, Self-Employed | May 2026 – Aug 2026*

- Delivered individualized web development instruction with live troubleshooting and debugging support, independently managing scheduling and curriculum design.

Programming Instructor — Code Ninjas — Northborough, MA *Northborough, MA | Oct 2025 – Jul 2026*

- Taught JavaScript fundamentals and guided students through debugging exercises across a range of skill levels.

EDUCATION

TEC Connections Academy, Wachusett Regional School District
High School Diploma — In Progress, Expected June 2027

CERTIFICATIONS

Coursera: Django Web Framework · Using Python to Interact with the Operating System · Git & GitHub · Troubleshooting and Debugging Techniques · React Basics · Crash Course on Python
